Save time and money through ergonomic and effortless manual handling

A time-efficient and ergonomic workplace thanks to TAWI lifters

As a manufacturer of bakery ingredients, Bakels mix raw produce according to recipes by emptying sacks with ingredients into mixing tanks. Since they invested in TAWI vacuum lifters to help employees lift and empty heavy sacks, they have been able to keep a consistent and optimal production flow. With TAWI vacuum lifters the employees can handle several pallets of heavy sacks without straining their bodies or losing speed.

“Everyone can handle heavy sacks with TAWI lifters, increasing flexibility and ensuring that the production never stands still.”

BAKERY INGREDIENTS SINCE 1904

Sanitary design for optimal cleanability and reliability

In the food and beverage industry, the bottom line is trust. The trust consumers have that the things they eat or drink are safe. The trust that food and beverage companies have in the sub-suppliers that process or produce these products to ensure that no unwelcome or harmful substances make their way into the food or beverages. Handling food and food products requires the highest level of sanitation and quality as well as a secure, yet delicate, touch. TAWI has a long history of supplying lifting solutions to the food and beverage industry and a deep understanding of how companies in this segment work – and what they need to work more efficiently and more productively.

Contact your TAWI representative for a consultation on how TAWI solutions can help you save money and create a safer and more ergonomic work environment for your employees.
